A-1b

● A 60-year-old male patient with a long history of hypertension and diabetes mellitus. He presented with a 2-week history of increasing weakness and fatigue. Physical examination revealed a pale, thin man with a heart rate of 100 beats per minute and a blood pressure of 160/90 mmHg. Laboratory tests showed a hemoglobin level of 8 g/dL, a hematocrit of 24%, and a mean corpuscular volume of 84 fL. The serum ferritin level was 100 ng/mL, and the serum transferrin saturation was 45%. The patient was treated with oral iron supplements for 6 weeks, but his symptoms persisted. A bone marrow biopsy was performed, which revealed a hypercellular marrow with a marked increase in erythroid precursors. The patient was eventually diagnosed with a myelodysplastic syndrome and received chemotherapy.
